

Coding Integrity Program

The Coding Integrity Program ensures that your health service receives the appropriate value for the clinical work performed and you are not disadvantaged by a DRG version change

Changes to DRG classification systems pose a medium term risk to health services' weighted activity and future budget allocations. This program will help your organisation

- » Maximise your activity from your current patient base
- » Reach your funding targets without increasing activity
- » Enhance your downstream documentation to improve safety, quality and maximise funding value
- » Implement a targeted coding audit process

A coding integrity program has been developed to manage this risk

We have developed the **Coding Integrity Program** to assist hospitals ensure they are using the most appropriate diagnosis codes for the patients they are treating, as well as identifying documentation or coding improvement opportunities

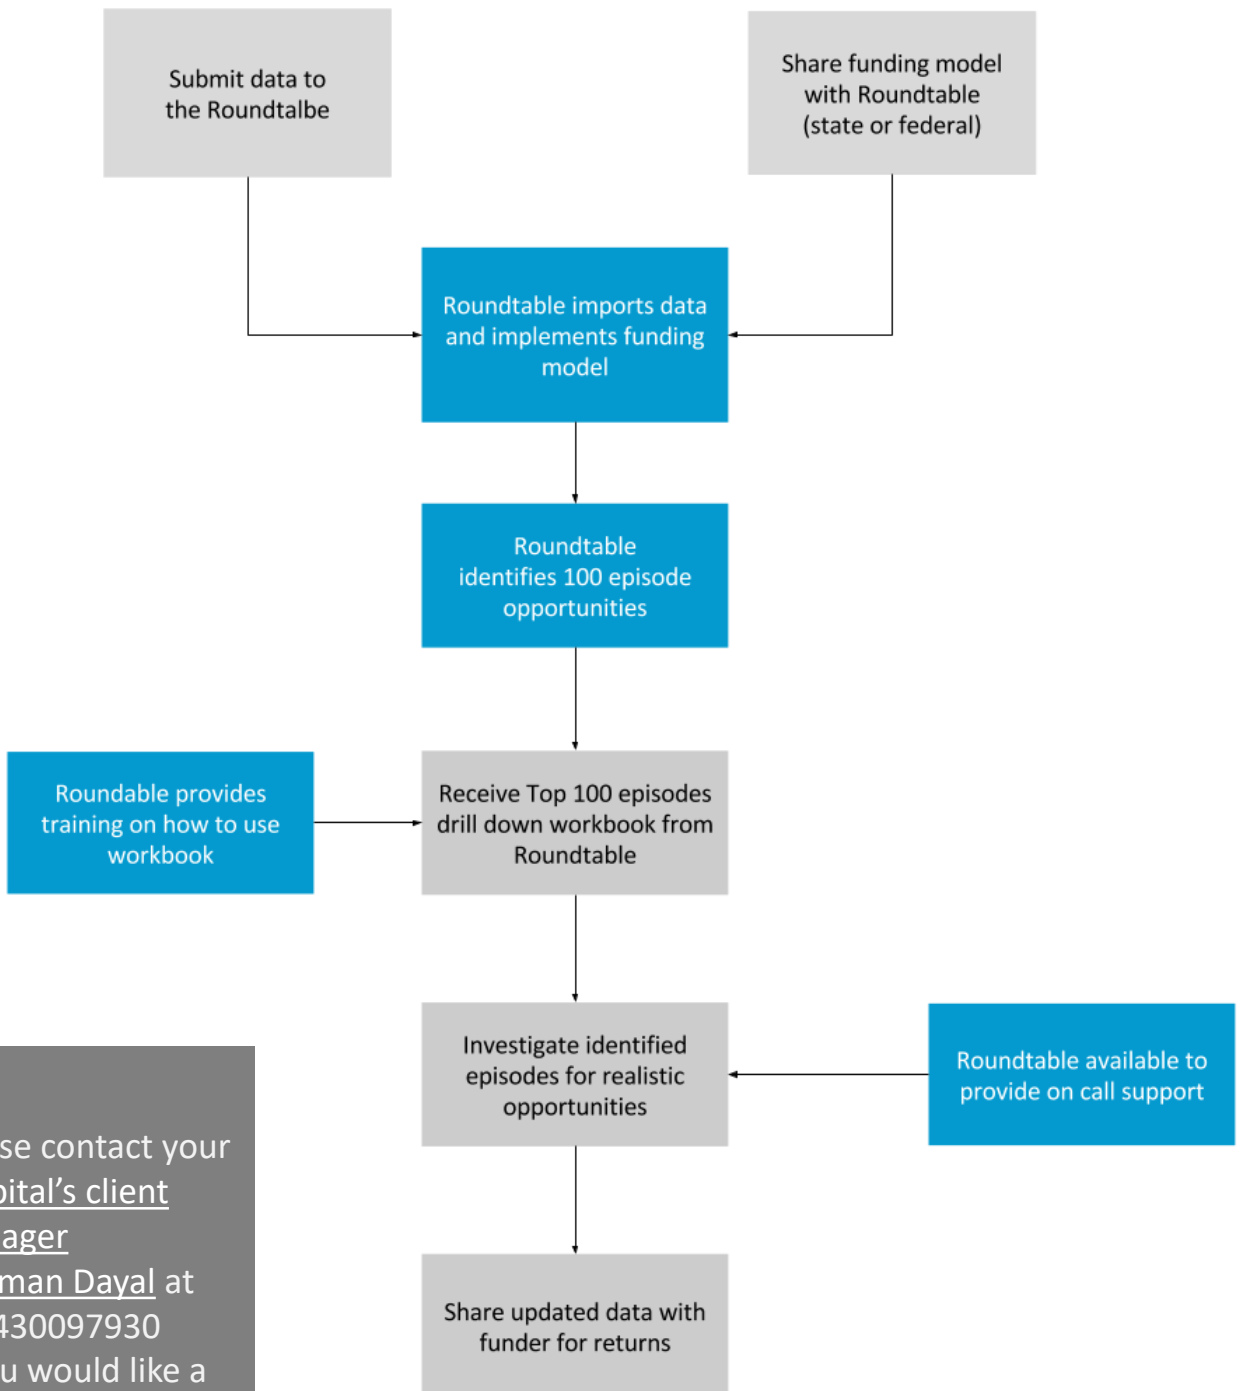

What's included?
<p style="text-align: center;">\$8,000 (ex GST, per month, minimum 3 months)</p>
<ul style="list-style-type: none">» Top 100 episodes for investigation<ul style="list-style-type: none">» Maximum return episodes - where the hospital may get the most <u>weighted unit</u> if they moved from a lower to higher acuity DRG.» Minimum effort episodes - where a hospital needs only 1 diagnosis carrying complexity to move to a higher acuity DRG» Basic excel episode viewer with coding suggestions based upon millions of records» Monthly analysis

» Hospitals were able to realistically realise 20% of the potential weighted units identified by the coding integrity program (CIP)

» Achieve this in a matter of days not weeks

How does it work?

📢 Please contact your hospital's client manager or Aman Dayal at +61430097930 if you would like a customised solution
